

## How to install

Follow these instructions to install fonts on the operating systems listed below. If you have trouble, consult your system manual or contact your local distributor. Our fonts are delivered in compressed ZIP format.

Please use the built-in utilities of your operating system or a recent version of a decompression utility such as WinZip, Winrar or StuffIt Expander to open these files and extract the fonts before installation.

### Attention

- Do not install multiple versions of the same font on one computer. That absolutely applies for OTF and TTF. Only ONE of those formats should be installed on a single computer.
- Never rename any font files, as this may render them unusable.

#### • Mac OS •

### Open the Font Book

Double-click on the downloaded font file. It should automatically open in the Font Book app.

### Install the Font

Click Install Font in the Font Book. Your font is now installed and available for use.

#### • Windows •

### Open the Font File

Right-click the font file and select Install. This will add it to your Windows font library.

Alternatively, you can go to **Control Panel → Appearance and Personalization → Fonts**. Drag and drop the font file into this folder.
